Art Unit: 1656

Claims 1-57 have been cancelled. Claims 58-100 are currently pending and are subject to restriction.

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group 1, claim(s) 58-78, 80, 81, and 100, drawn to nucleic acid encoding a fragment of SEQ ID NO: 2, polypeptide.

Group 2, claim(s) 64 and 89-95, drawn to gene therapy.

Group 3, claim(s) 79-81, drawn to antibody against fragments of SEQ ID NO: 2.

Group 4, claim(s) 82-85, drawn to a method for inhibiting signal transduction in vitro via SEQ ID NO: 2.

Group 5, claim(s) 82-85, drawn to drawn to a method for inhibiting signal transduction in vitro with antibody against SEQ ID NO: 2.

Group 6, claim(s) 86-88, drawn to a method of treating CNS disease in vivo via SEQ ID NO: 2.

Group 7, claim(s) 86-88, drawn to a method of treating CNS disease in vivo via antibody against SEQ ID NO: 2.

Group 8, claim(s) 96-99, drawn to antisense.

The inventions listed as Groups 1-8 do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Claim 58, for example, reads on a single amino acid, for example. Therefore, the inventions lack a special technical feature.

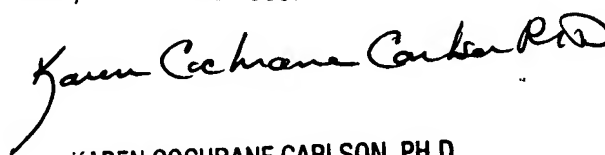

Additionally, there are 20 different variants of SEQ ID NO: 2 listed in Claim 59. **Applicants must elect a single variant for search, OR Applicants must provide a single sequence or subsequence** that will represent a subset of, or all of, the 20 different variants of SEQ ID NO: 2 listed in Claim 59. This is not a species election but an election of an invention because the variants differ in structure and cannot be searched via a single polypeptide or nucleic acid sequence search.
